

Fitness for Work screening is a must.

Establish a consistent objective alertness standard to reduce risk in your workforce.

# PVTWORKFIT

PVT WorkFit is the ideal Fitness for Work assessment. It is sensitive to factors that cause alertness deficits including fatigue, medication use (prescription, over-the-counter, and illicit), and medical conditions.

PVT WorkFit is scientifically validated and widely recognized as the gold standard assay of neurobehavioral alertness. Employees take a 10-minute Psychomotor Vigilance Test (PVT) as part of a fitness for work assessment. Clinicians can access test results instantly along with advanced analytics and normative data to aid interpretation and guide fitness for work assessments.

### Validated to be sensitive to alertness deficits due to:

Fatigue from sleep restriction, extended work shifts, night work

Drug effects

Medical conditions

### PVT WorkFit works because test results are unaffected by:

Aptitude

Education level

Practice effects

### Features include:

Accurate test delivery on iPad

Real-time results reporting on iPad or web dashboard

Analytics based on normative data to aid in test interpretation

Configurable results retention options

Multi-lingual support

Secure configurable report distribution tools

Originally developed for NASA and DOD Special Forces, our validated technologies offer the best in test accuracy, data analytics, security, and ease of use.

In any safety sensitive environment the ability for workers to be reliably alert is a fundamental requirement to be fit for work. PVT WorkFit provides an accurate quantitative tool to periodically screen for alertness deficits as part of fitness for duty evaluations.

PVT WorkFit is recommended for all employees in safety sensitive positions.
