

Why is Fatigue Meter™ the best solution for managing driver fatigue?

If you have an ELD for your HOS logs, you have everything you need for Fatigue Meter to help you right now.

	Fatigue Meter	Wearables & Cameras
Cost	Monitoring fee	Equipment cost and monitoring fee
Set up	Seamlessly integrates to your existing ELD system.	Installation or distribution of equipment is required.
Maintenance	None	Most wearable devices require daily charging. Devices can break and need to be replaced.
Impact on driver	None, Fatigue Meter does not require driver input.	Drivers don't want to wear special equipment. They are also concerned about privacy.
Timely notifications	Be alerted in time to mitigate a fatigue issue.	Devices alert you when there is a problem now... it's too late to do anything preemptively.
Fatigue education and coaching	Gain insight into what is causing fatigue within your fleet to help teach your drivers how to prevent fatigue risk.	Devices don't explain what causes fatigue which makes it hard to come up with a corrective action.

"When we give the drivers the information, more often than not they will make the right decisions."

Maverick – Dean Newell, VP Safety and Training
