PULSAR INFORMATICS

Need help managing employee fatigue?

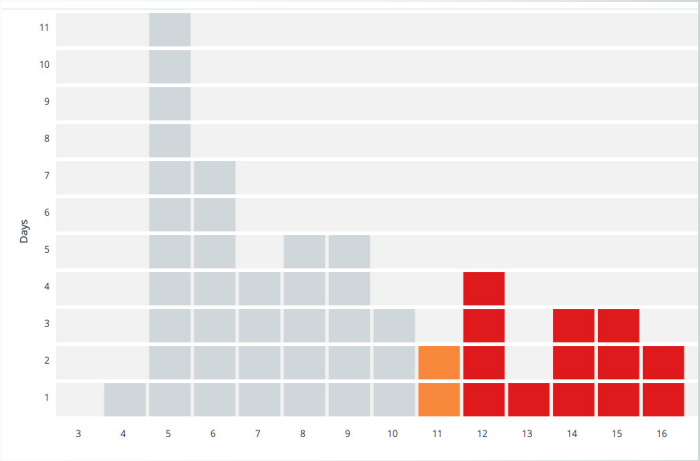
Our solutions provide vital insights about the fatigue stressors that are affecting your employees.

WORKFORCE fatigue meter™

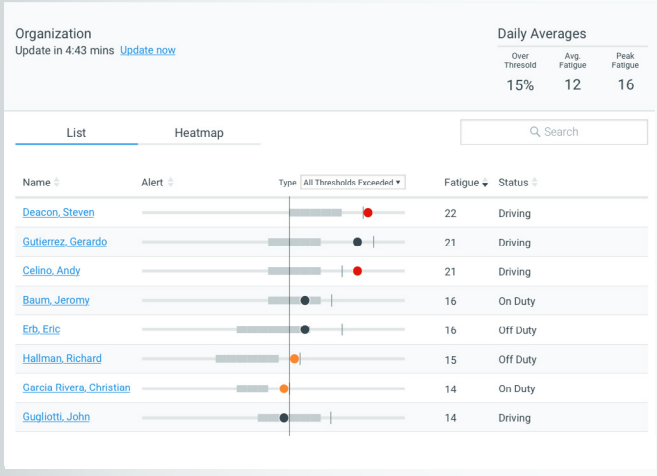
Gain insight before setting future schedules.

Team Insight provides valuable information to help run a safer operation. Benchmark your operation's fatigue risk, monitor trends, and use averages and peaks to set safety thresholds.

Quickly compare past averages and adjust upcoming schedules accordingly.



Monitor fatigue risk levels while managing your employees.



Dashboard automatically samples your scheduling and/or work log database throughout the day to monitor fatigue risk levels and provide you with a real time picture of the overall fatigue risk across your workforce. When a prescribed fatigue threshold is exceeded, your safety managers receive notification so that safety coaching can kick into action.

Originally developed for NASA and DOD, our technologies offer the best in security, performance, and ease of use.

Fatigue Meter shows you exactly how operational factors such as long duty hours, night shift work, and restricted sleep opportunities combine and contribute to elevated fatigue risk in your operation.

In-depth understanding enables smarter mitigation strategies such as a worker reassignment, nap and break strategies, and schedule changes.
